LAKSHMI PRASANNA MANTHENA

Java Full Stack Developer · GenAI-Augmented Software Delivery · HCL Technologies

+91 9505606669 · Mail: lakshmimanthena4769@gmail.com · Chennai, India · Open to Relocate · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Computer Science graduate and certified Java Full Stack Developer transitioning from an Operations Analyst role at HCL Technologies into full-time development, combining 3 years of enterprise work experience with hands-on, production-ready projects in Java, Spring Boot, Microservices, React.js, and MySQL. Actively applies Generative AI tools (ChatGPT, GitHub Copilot) throughout the development lifecycle — for code generation, debugging, unit test creation, and technical documentation — to accelerate delivery and improve code quality. Completed a 6-month Java Full Stack internship and delivered two end-to-end applications. Eager to contribute as a Java Full Stack or Backend Developer in a collaborative, growth-focused, AI-forward engineering team.

TECHNICAL SKILLS

Languages	Java (Core Java, OOP, Collections, Exception Handling), JavaScript (ES6+)
Frontend	React.js, Angular, HTML5, CSS3, Bootstrap, Tailwind CSS
Backend	Spring Boot, Spring MVC, REST APIs, Microservices Architecture, JWT Authentication
Database	MySQL, SQL (JOINs, Aggregations, Subqueries, Query Optimization, Data Validation)
AI Tools	ChatGPT, GitHub Copilot — code generation, code review, debugging, unit test generation, technical documentation
Tools	Git, GitHub, Postman, IntelliJ IDEA, Eclipse, Maven, Netlify CI/CD, Docker (Familiar)
CS Concepts	OOP Design, Data Structures, Algorithm Design, Problem Solving, Complexity Analysis
Soft Skills	Communication, Adaptability, Passion for Learning, Agile Collaboration, Process Optimization

PROFESSIONAL EXPERIENCE

Customer Service Representative | Technical / Application Experience / ***HCL Technologies*** Aug 2023 – Apr 2026 · Chennai, India

- Worked extensively with SQL queries (JOINs, aggregations, data validation) to analyze and process large-scale healthcare billing datasets — directly applicable to backend data engineering and API design.
- Collaborated with technical teams to identify and resolve 200+ monthly data discrepancies, improving billing accuracy and reducing escalations to client stakeholders.
- Mapped end-to-end data flow across enterprise billing systems, identifying process bottlenecks and proposing structured improvements to backend data pipelines and reporting workflows.
- Improved data accuracy and reporting efficiency through structured query optimization and validation workflows, reducing processing errors across daily billing cycles.
- Explored Generative AI tools (ChatGPT, enterprise AI platforms) for knowledge discovery, technical documentation, and process analysis, building early familiarity with AI-assisted operational workflows.
- Coordinated cross-functional data operations in a fast-paced enterprise environment, building Agile collaboration skills directly transferable to developer teams.

Java Full Stack Developer Intern / ***Datapro*** Oct 2022 – Mar 2023 · Visakhapatnam, India

- Built structured Java applications applying Core OOP principles (encapsulation, inheritance, polymorphism) as part of a 6-month full stack apprenticeship, using IntelliJ IDEA and Eclipse as primary development environments.
- Developed responsive web pages using HTML5, CSS3, and JavaScript; practiced MySQL database operations including table design, data insertion, and SQL query writing.
- Used GitHub Copilot and ChatGPT to accelerate boilerplate code generation, debug logic errors, and draft inline documentation, reinforcing AI-assisted coding habits early in the development lifecycle.
- Used Git for version control and developed a foundational understanding of full stack development workflows in a professional team environment.

PROJECTS

Shopper — E-Commerce Platform

Java · Spring Boot · Microservices · MySQL · JWT · REST APIs · React.js

- Architected a distributed e-commerce platform with 4 independently deployable microservices (product, cart, order, user) using Core Java and Spring Boot with clean OOP design principles.
- Designed and exposed 15+ scalable RESTful APIs with a normalized MySQL relational schema; implemented cart pricing logic and order processing workflows using structured algorithm design.
- Secured all API endpoints using JWT authentication with Role-Based Access Control (RBAC), protecting both user and admin routes across all microservices.
- Diagnosed and resolved distributed service communication failures, demonstrating end-to-end debugging and problem solving across a multi-tiered system architecture.
- Used GitHub Copilot for scaffolding REST controllers and DTOs and ChatGPT for API documentation drafts and code-review assistance, then validated and refined all AI-suggested code before merging.
- Wrote JUnit test suites for core business logic — including AI-assisted generation of initial test scaffolds — and maintained clean code through Git-based version control.

FoodieGo — Food Delivery Platform (Frontend)

React.js · JavaScript · HTML5 · CSS3 · REST APIs · CI/CD · Netlify

- Built a mobile-first responsive SPA using React.js with modular component architecture, real-time order tracking UI, and a fully functional admin dashboard.
- Designed responsive layouts using CSS3 and Bootstrap, ensuring consistent UX across desktop and mobile screen sizes.
- Configured a CI/CD pipeline on Netlify to automate build and deployment on every Git commit, ensuring consistent and reliable releases.
- Integrated REST APIs to connect frontend order workflows to backend services, handling loading states and response rendering cleanly.
- Live Demo: online-restaurant-ordering. Netlify app (React.js SPA, deployed via Netlify CI/CD)

EDUCATION

B.Sc. Computer Science | Aditya Group of Institutions, Andhra Pradesh | 2020 – 2023

CERTIFICATIONS

- Java Full Stack Developer — Skill It Academy (Core Java, Spring Boot, Microservices, React.js, MySQL)
- HCL Yuva AI Program — HCL Technologies
